Bystronic

A QUARTER OF A CENTURY

A BIRTHDAY IN NIEDERÖNZ: THE BYSTRONIC COMPETENCE DAYS THIS YEAR WERE NOT ONLY MARKED BY INNOVATIVE PRODUCTS. THEY ALSO FORMED A FRAMEWORK FOR THE CELEBRATIONS OF BYSTRONIC'S 25TH ANNIVERSARY.

Text: Martin Engel, Photos: Michael Meier

About 1,000 guests from nearly 50 countries visited Bystronic during the Competence Days in Niederösterreich.

IT ALL STARTED at the beginning of the 1980s. Early attempts were made to construct a device that was later to become a laser cutting system. It was the time of the innovator. The time of the visionary. A first prototype was followed by initial practical experience under production conditions, and in 1984, the market launch: The first machine was exhibited, the first customers were found, everything happened for the first time. The customers delivered fantastic results and hence became the best salespersons. Batch production of the laser cutting systems was started.

Two years later, the Bystronic Laser AG company was founded in a Swiss village that was soon to become a household name within the industry. Niederösterreich. The village is still the company's headquarters and will remain so. But the Bystronic Group today is at home throughout the world. It no longer manufactures exclusively in Switzerland,

but also in Germany, China, Romania. It has sales and service subsidiaries in 25 countries. And it has customers all around the globe – satisfied customers. Their number increases daily, since Bystronic stands for Swiss quality and for innovation. It is an affordable innovation, since Bystronic systems are user-friendly, provide high performance, and are easy to operate. And last but not least, because Bystronic assists its customers with local expertise and with lifetime support. Because Bystronic is a trusted partner.

Bystronic says thank you. Thank you for your loyalty. Thank you for the suggestions. Thank you for visiting us during the Competence Days in Niederösterreich. Thanks for praising our innovations, and for drinking a toast with us to 25 years of Bystronic and to other projects in the future. We are looking forward to it.

It all began with laser cutting. Today, Bystronic offers complete solutions for sheet metal forming.

A crowd puller: The exhibition on 25 years of Bystronic reviewed the company history.

Crystal clear: Bystronic systems hold up even under the most critical gaze.

An international audience: Bystronic customers are at home around the globe.
